

CACI Expands Technology and Expertise Investments in Texas Technology Corridor

Opens New Port San Antonio, Austin, and Capital Factory Facilities to Focus on Advanced Cybersecurity, Next-Gen Communications, and Deep-Learning

Arlington, Va. September 17, 2019 - CACI International Inc ([NYSE: CACI](#)) announced today further expansions of its presence in the Texas Technology Corridor, marked by the Sept. 20, 2019 opening of a new office in Port San Antonio, a recent office expansion in Austin, and plans to create new space in the Capital Factory technology incubation hub in Austin.

CACI engineers and experts working in these new and expanded facilities will increase the company's support of the cybersecurity and technology needs of the region's defense, intelligence, academic, and civilian communities.

CACI will use the new 8,000-square-foot Port San Antonio facility to collaborate with the U.S. Air Force and other government customers in the region to provide research and development of full-spectrum cybersecurity and cyberspace solutions. Over the next five years, CACI expects to hire additional cyber professionals, including software and systems engineers, cyber architects, intelligence analysts, and others, in the San Antonio area to meet the growing demand for cyber-related technologies.

The new San Antonio facility further expands support CACI offers to several important military programs at Joint Base San Antonio. The facility will also assist CACI's continued participation in the University of Texas at San Antonio (UTSA) National Security Collaboration Center. Following the Sept. 20 ribbon cutting, UTSA researchers will discuss collaboration opportunities with CACI's Global Research Network, a secure infrastructure of communications technologies and testbeds where CACI can host cyber research with the government, universities, and other private entities.

In Austin, CACI recently opened a new 55,000-square-foot facility where a 200-person team supports signals intelligence and electronic missions conducted by the U.S. Army, Navy, and intelligence community. These missions include ground-based processing stations for Naval Air Systems Command EP-3, P-8 and MQ-4C TRITON aircraft, as well as other signals intelligence capabilities.

Kevin Kelly, President of CACI's National Security and Innovative Solutions sector, said, "CACI's substantial investments in San Antonio and Austin further demonstrate our commitment to grow our support of our customers, including the Air Force's cyber and C4ISR elements in Joint Base San Antonio, NSA in Texas, and the U.S. Army Futures Command based in Austin."

CACI also debuted as the newest Innovation Council partner at Austin's Capital Factory, a technology hub that serves as the center of gravity for entrepreneurs in Texas. The company sponsored an August Community Showcase where it presented the latest innovations in next-generation communications, deep-learning, and counter-drone technologies. CACI has also established an office in the Capital Factory to stay connected to this innovation ecosystem.

CACI's 22,000 talented employees are vigilant in providing the unique expertise and distinctive technology that address our customers' greatest enterprise and mission challenges. Our culture of good character, innovation, and excellence drives our success and earns us recognition as a *Fortune* World's Most Admired Company.
